## Who we are?

*Choose the future!*

**SsakoolHypers** is the R&D division of the Hungarian  company Kolossa Studio Ltd., and a new-generation architectural and interior design brand rooted in both **engineering precision** and **artistic freedom**.

We believe that space is more than physical reality — it is experience, message, and care.  
It shapes how we live, feel, and connect.

Our mission is to redefine the built environment by harnessing the technologies of the **Fourth Industrial Revolution**.

We design spaces that do more than meet modern expectations — they inspire, engage, and breathe with the people who inhabit them.

SsakoolHypers unfolds along two main directions:

**HomeArt™**, a collection of unique spatial objects at the intersection of architecture, design, and artistic thought

**Nivicor™**, a platform for intelligent, personalized, and sustainable building systems

## HomeArt™

*Live the Art!*

HomeArt by SsakoolHypers offers architectural and interior design elements that go beyond mere functionality. These pieces don't just decorate a space — they reinterpret it.

Each HomeArt object is a reminder that every wall, opening, transition or furnishing can be more than it appears: it can become a gesture, a personal message, a moment within space.

**The foundation of the collection is the belief that people today have nearly unlimited opportunities to live and work in spaces that enrich life aesthetically.**

The technologies developed by SsakoolHypers serve this vision: the forms may be soft and organic or sharp and angular, while the materials are often reimaged.

HomeArt blends the freedom of art with the tangibility of quality.

Whether it's a vibrant room divider, a sculptural wall panel, a custom furnishing or a distinctive doorframe, each piece becomes part of the space's identity — as a subtle accent or a defining focal point.

## LightCut

*the inspiring faces of light*

The first HomeArt collection LightCut, places the flow and spatial power of light at the centre of its design.

These distinctive elements — whether room dividers, wall inserts, or aperture-like compositions — function simultaneously as architectural structures and visual statements.

Their unique surface character and formal language are made possible by SsakoolHypers' proprietary DragonSkin technology.

LightCut pieces feel at home in a wide range of interiors — from classical and modern to bold, avant-garde spaces.

**There are no fixed forms — the essence lies in the play of light, the translucency of the material, and the ability to generate atmosphere.**

By day, they colour sunlight. By night, they shape new moods with artificial illumination.

## SpaceForm

*geometry, expression*

The SpaceForm collection transforms architectural surfaces — walls, ceilings, transitions — into active spatial components.

It approaches space not as a backdrop, but as something that speaks through form, rhythm, and proportion.

Each surface can be curved, layered, recessed, patterned or flat. SpaceForm elements serve as a foundation for custom wallpapers, textured coatings, or bold colour treatments, helping spaces find their own visual language.

Behind the visible form lies technical function: the system can integrate lighting, ventilation, and other mechanical elements — keeping them hidden, yet fully accessible and operational.

**SpaceForm doesn't just decorate a room. It composes it — visually, atmospherically, and structurally.**

## ArtCover

*from function to Art*

The ArtCover collection is designed to conceal outdoor mechanical units — such as air conditioners or heat pumps — without compromising their function.

These sculptural enclosures do more than hide — they give identity to the space.

**What begins as a technical necessity transforms into architectural presence and aesthetic value.**

ArtCover elements can be mounted without demolition or structural modification. Their open-shielded design ensures adequate airflow and full service access, while their shape, finish and material are always tailored to the site and its context.

ArtCover doesn't just cover — it becomes part of the garden or the façade as a visual focal point.

  
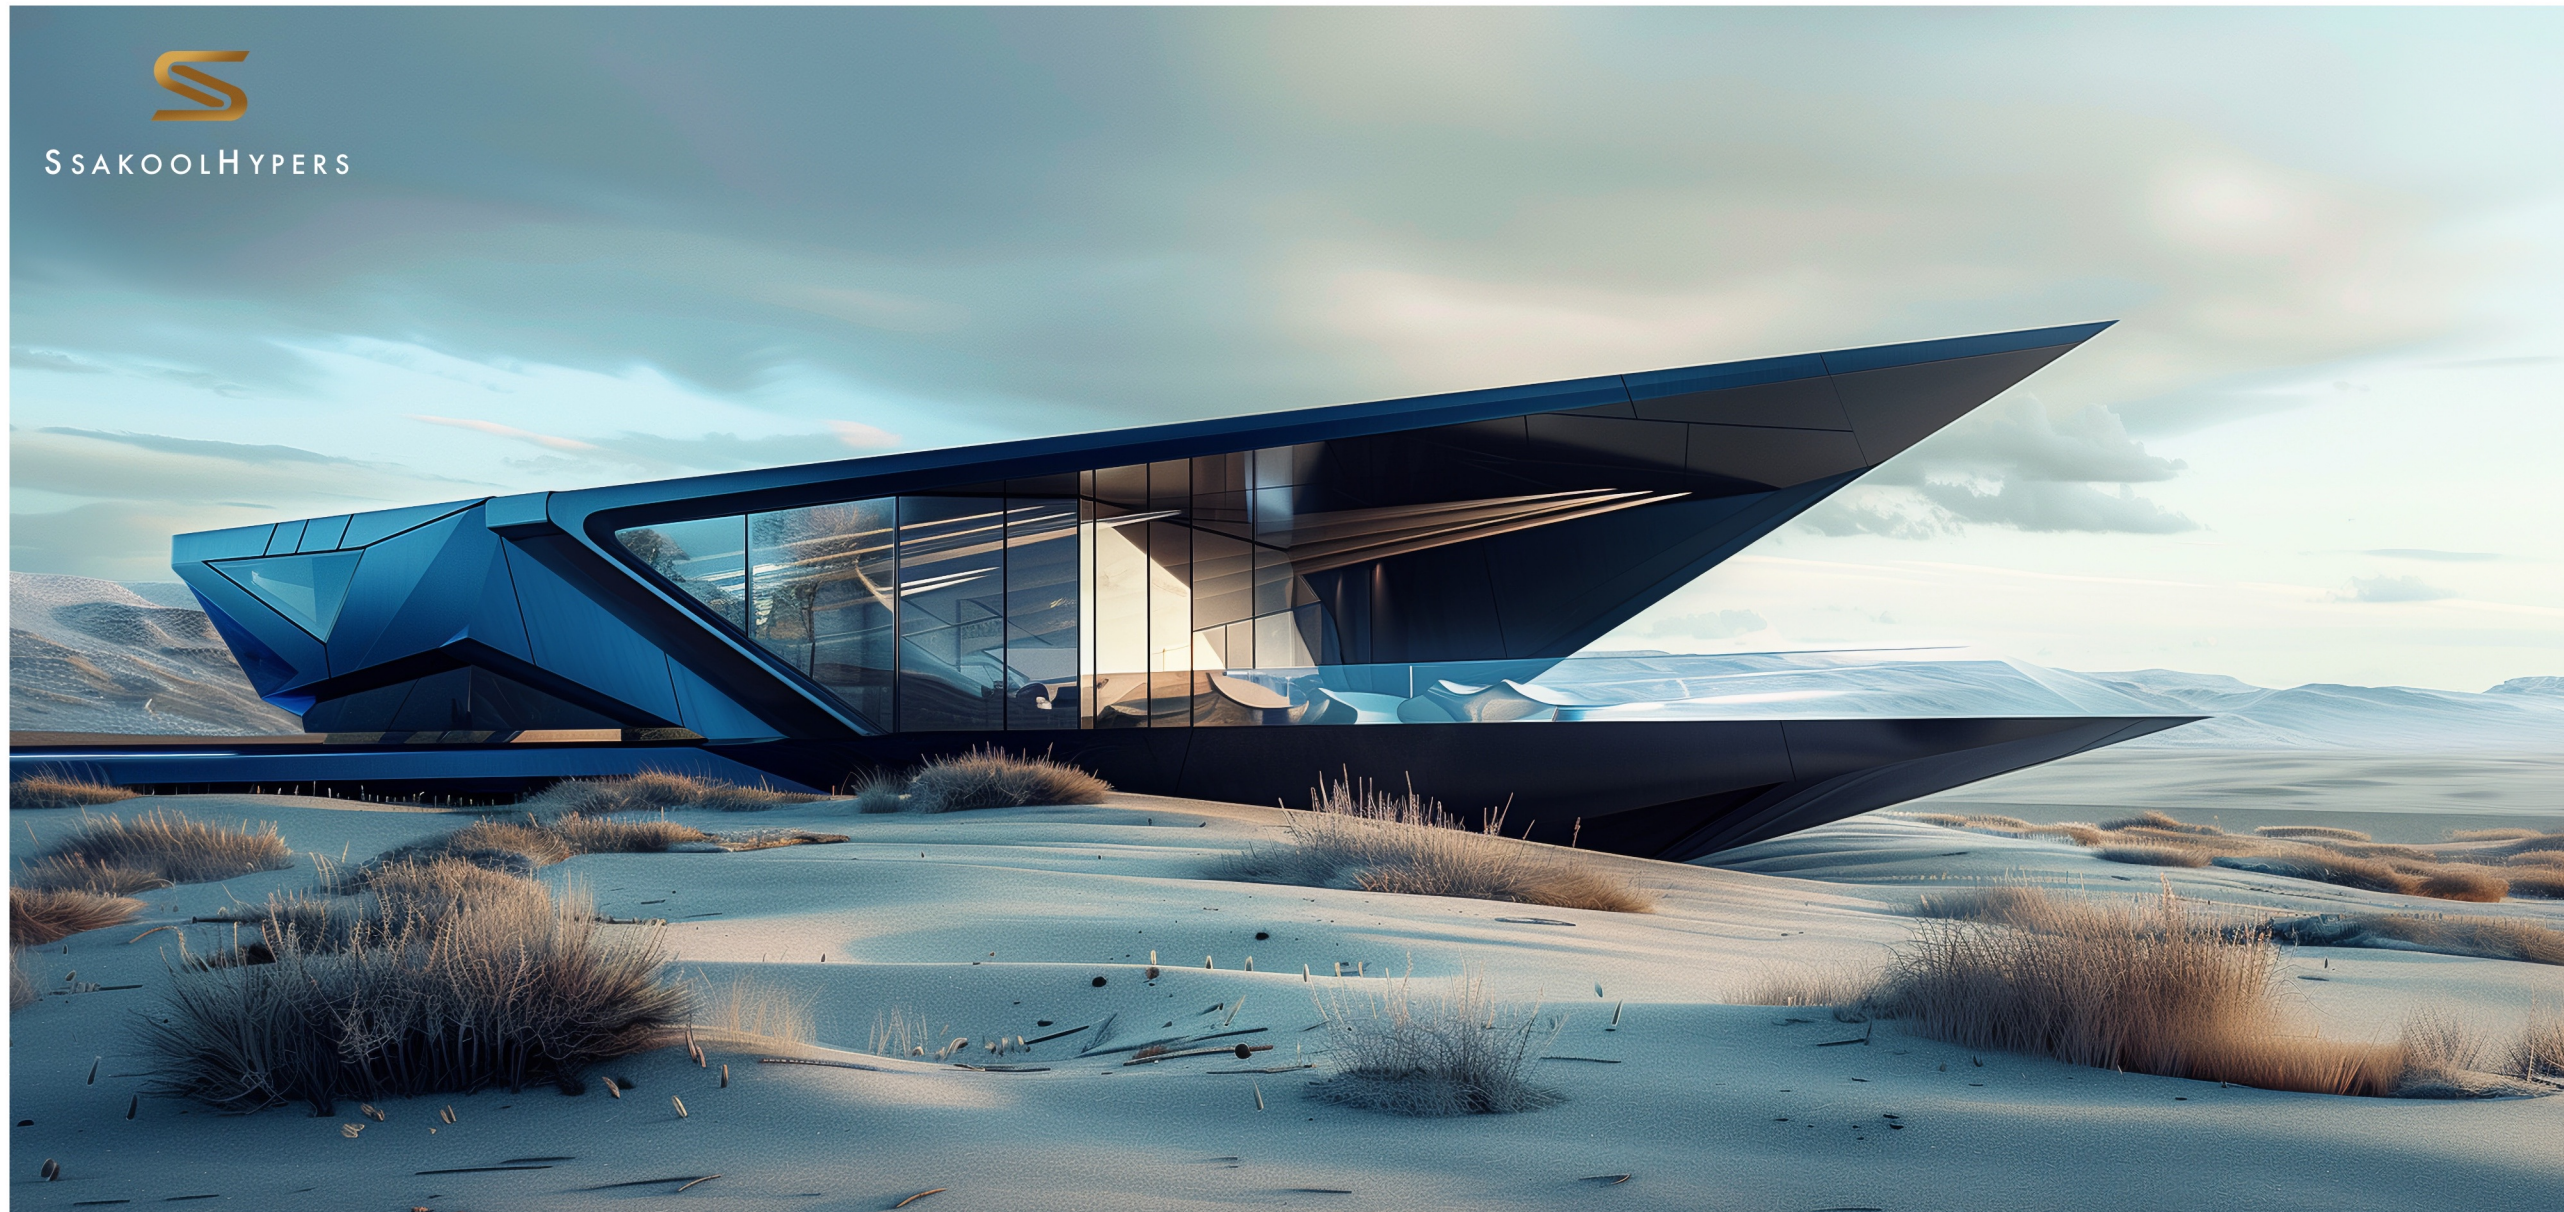

SSAKOOLHYPERS

*Nivicor*

SSAKOOLHYPERS

## Nivicor™

*Live it!*

We live in the era of the Fourth - Fifth Industrial Revolution, defined by the interconnection of digital technologies, artificial intelligence, robotics, big data and the Internet of Things.

This revolution will have a significant impact on architectural processes, material production, and construction.

Automation and industrial prefabrication are becoming more common in the construction industry, dramatically enhancing quality and efficiency while reducing waste and environmental impact. In the post-Fourth Industrial Revolution era, only sustainable construction practices will have a future.

**Nivicor by SsakooolHypers is the first residential-scale construction-system development fully aligned with the advancements of the Fourth Industrial Revolution. We aim to create buildings with maximum comfort, innovative aesthetics, and the highest quality, all while being environmentally conscious.**

# Energywall™

*thermal mastery*

**More than a wall — a passive climate ally.**

- Our proprietary Energywall™ system uses recycled local materials like desert sand, to create thick, dense, thermally massive walls that absorb night-time coolness and buffer against daytime heat surges.
- This significantly reduces the need for active cooling, contributing to lower emissions and greater resilience.
- The material also dampens vibration from wind and protects against sand abrasion, while maintaining aesthetic quality and architectural freedom.

**Built with industrial precision, minimal waste, and maximum quality: Nivicor, live it!**
